

There is no need to compromise.

Take the SandMat Challenge

Try SandMat on your most troublesome bunker and **see the difference!**

We are so confident that we will send you a **FREE** 3' x 12' sample, of the SM400 complete with necessary fastening staples to put to the test on your worst bunker.

FREE SHIPPING ANYWHERE IN THE WORLD

Instructions:

- Strip away the sand of a 3ft section in the bunker
- Roll out the 12ft long sample and fasten with included staples
- Cover the bunker liner with sand and be amazed at the results!

SM400 - Product Description

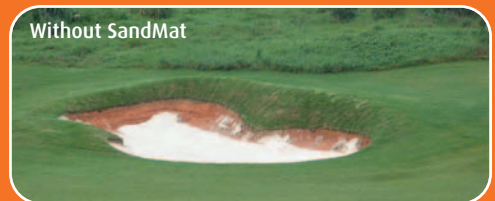

A thick triple bonded product which allows for the heaviest water flows. This high loft, rapid draining, three dimensional geotextile is the perfect product for your highest flashed and most demanding sand stabilization conditions.

Testimonial

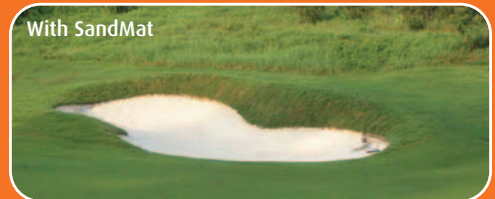

SandMat has proven to be the most economical of all liners in the market. I find SandMat to be a very reliable bunker liner providing complete erosion and migration control even through the heaviest typhoons. It keeps its shape and form even after extended periods and through the harshest winter.

During the recent USPGA Champions Tour event with heavy, consistent rainfall throughout the tournament the sand on the faces did not move and the bases remained dry and playable as if there was no rain. There was no need to send any maintenance staff out during play to repair bunkers, thus saving time and money and providing true tournament conditions.

Kym Fuller
Golf Course Construction & Maintenance Superintendent
Jack Nicklaus Golf Club Korea

Without a SandMat liner, the sand holds more water weight, creating conditions for slumping and washouts.

Enhanced Drainage of the SandMat bunker removes water from the sand profile, therefore reducing the weight of the sand and the likelihood of a washout.
